

Dual-Ended Truck Brake Inertia Dynamometer (Refurbished Equipment)

Product Overview

Currently there is a previously owned Dual-Ended Truck Brake Inertia Dynamometer in our inventory. This dynamometer is available in as-is condition or refurbished (like-new) condition. Depending upon your needs, refurbishment can include modified components and the addition of optional equipment to allow any number of applications and can be on-site within a short time frame.

The dynamometer will be checked for proper operation and employ our ProLINK software package for control, data acquisition, analysis, and reporting. The refurbished dynamometer will feature a full one-year warranty on all refurbished components.

Typical specifications for the machine are listed and we encourage discussion to determine how this dynamometer can be configured for your requirements. We would be pleased to provide a quote with detailed capabilities, timing, and performance specifications. Pricing and delivery are dependent upon the necessary refurbishment and modifications required.

For more information on the CV Dynamometer contact LINK at +1-734-453-0800.

Machine Capabilities

- Max Speed: 1200 RPM
- Max Inertia: 3,345 kgm*2
