

SAE No.2 Test Stand

(Refurbished Equipment)

Product Overview

Currently there is a previously owned SAE No. 2 Test Stand in our inventory. This machine is available in as-is condition or refurbished (like-new) condition.

Depending upon your needs, refurbishment can include modified components and the addition of optional equipment to allow any number of applications, and can be on-site within a short time frame.

The test stand will be checked for proper operation and employ our ProLINK software package for control, data acquisition, analysis, and reporting. The refurbished machine will feature a full one-year warranty on all refurbished components.

Typical specifications for the test stand are listed under machine capabilities and we encourage discussion to determine how this machine can be configured for your requirements. We would be pleased to provide a quote with detailed capabilities, timing, and performance specifications. Pricing and delivery are dependent upon the necessary refurbishment and modifications required.
